

9 PEAKS RANCH

First Choice Bull Sale 18TH ANNUAL

*Bulls With a
Work Ethic*

SELLING 89 SPRING YEARLINGS AND 25 FALL YEARLINGS

TUESDAY • OCTOBER 8, 2024 • 1 PM
AT THE RANCH NEAR FORT ROCK, OR

Nine Peaks Ranch | Aaron & Rebecca Borrer
P.O. Box 38 | Fort Rock, OR 97735 | Phone: (541) 633-3284

Dear Friends,

Welcome to the 9 Peaks Ranch Bull Sale. This year's sale looks a little different, as we transitioned to a cow herd that calves exclusively in the spring. We have fewer fall bulls to sell this year, but all are out of our top-tier cows that we kept for an extra year, and it shows. The bulk of the offering will be 18-month-old spring bulls that will be older and bigger to breed your cows.

We have been watching the breed associations track growth and carcass traits for many years. Growth, frame, and carcass traits are very important to feeders and packers' profitability, and for beef demand. But they are not traits that directly help the cow-calf man stay in business. In a nutshell, commercial cow-calf producers need to sell calves for more than they spend keeping and feeding their cows to produce those calves.

One widely ignored statistic is that while genetic potential for weaning weight has been increasing steadily over the last 25 years, the weaned calves' actual scale weights at shipping that comprise the cow-calf producer's paycheck have not changed in those same years. This means two things: one, you will not have heavier weaning calves simply from buying bulls with more growth potential, and two, that it's the buyers of your calves that are realizing the growth potential once these calves get onto a total mixed ration in the feedlot.

So, how do you sell more pounds of calf? The answer lies in fertility and longevity. Fertility is far and away the most important trait to commercial cow-calf producers' profitability. If a cow has her calf right at the start of the calving season, say March 15, her calf will wean heavier than if that same calf was born on June 15. And if she wasn't bred at all, you have to pull a weaned heifer out of your sale bunch to replace her . . . and that heifer won't wean a calf for an extra year. A commercial cow simply must produce a weaned calf for at least 5 or 6 years to make you a profit.

We are excited to see the efforts of the American Angus Association (AAA) to quantify these input traits, such as fertility and longevity. Heifers that breed early, continue to calve early every year without issues, and don't leave the herd until they lose their teeth will keep a lot more money in your pocket. The Angus Association intends to take traits such as foot structure, udder and teat conformation, disposition, heifer and cow fertility, and cow longevity and create an index that shows what these can either benefit you or cost you, as a commercial cow-calf producer.

The AAA has sent us preliminary data for these input traits, and the 9 Peaks cow herd, as a whole, is very favorable. This is not a surprise to us; we have seen the benefits of our strict culling practices for fertility, udders, disposition, mothering ability, structural soundness, and feet. If you look at the pedigrees from the 9 Peaks herd sires and sale bulls, you will find dams, granddams, and great-granddams that have weaned a calf every year for 6, 8 or even 10-plus years. The results of our emphasis on cow profitability will show up over the long term in your cow herd!

Give us a call if you want to visit about the sale offering. We look forward to seeing you on October 8 in Fort Rock.

Until then,
Aaron & Rebecca

m3cattlemarketing@gmail.com
www.m3cattlemarketing.com

Absentee Bidding: Please call any of the listed Representatives or Aaron or Rebecca Borror directly for personal service. You may also preregister and bid online at www.dvauction.com.

Sale Location: 9 Peaks Flat Iron Ranch, East of Fort Rock, OR
Map on the back cover.

Recommended Lodging:

LAPINE SALE HEADQUARTERS:

Best Western Newberry Station: 16515 Reed Rd. & Hwy. 97, LaPine, OR, (541) 536-5130. \$150 plus tax per night, ask for the 9 Peaks Bull Sale Rate.

Klamath Falls Motel 6: 5136 South 6th St., Klamath Falls, OR, (541) 884-2110. Pets stay free.

Best Western Olympic Inn: 2627 S. 6th St., Klamath Falls, OR, (541) 882-9665.

Shilo Inn: 2500 Almond St., Klamath Falls, OR, (800) 222-2244 or (541) 885-7980. Pets with \$25 deposit.

Lunch: Angel and Jamie Roscoe of the Cowboy Dinner Tree will prepare a complimentary lunch for sale attendees, served at noon on sale day.

Transportation: Upon request, we gladly meet planes landing in Redmond, OR. Alaska, American, Delta and United fly into Redmond. The Bend/Redmond airport is a two-hour drive from the sale location. Private planes will also be met at the Christmas Valley Airport, 30-minute drive from the sale site.

Bull Delivery: Free delivery in Oregon and adjoining states with the purchase of two or more bulls.

Ultrasound Test: Performed by Matt Lane, Billings, MT.

Wintering: Bulls purchased for spring breeding may be kept at 9 Peaks Ranch until April 1, 2025, free of charge. No insurance will be necessary for this period as any loss will be covered under our guarantee.

Volume Discounts: 5% off with the purchase of 5 or more bulls by one ranch, 10% off with the purchase of 10 or more bulls by one ranch.

Retained Ownership: 9 Peaks Ranch retains a 25% semen interest and revenue sharing in all of the bulls selling through the 2024 9 Peaks Ranch First Choice Bull Sale. Buyers will receive full possession and full salvage value on all bulls purchased.

Guarantee: 9 Peaks Ranch guarantees your satisfaction with your purchase through the end of the first breeding season. This guarantee does not cover malnutrition. Young bulls must be cared and fed similarly to young heifers expecting to become pregnant. Any claim must be made in a timely manner. If you have a bull die in the first breeding season for any reason that is not obvious, please have your vet perform a necropsy so that we can determine cause of death. Your claim will result in 9 Peaks providing a suitable replacement bull. If one is not available, your money will be refunded or you will receive a credit in our next sale. Any salvage value will be forwarded to 9 Peaks Ranch.

Semen Test: Performed by Rod Ferry, DVM, in September 2024. All bulls selling will be classified as a "Satisfactory Breeder" according to the Society for Theriogenology Bull Breeding Soundness Examination standard.

Herd Health: The 9 Peaks Herd has had extensive testing for BVD and BLV with no positive results. 9 Peaks Ranch guarantees all bulls to be free of these diseases at the time of delivery. Every bull in the sale has either been tested free of the AM, NH, and CA genetic defect, or is not a potential carrier of these genetic defects.

Vaccinations: All bulls have been vaccinated with Vision 8/Somnus, Bovi-Shield, Lepto-Vibrio, pinkeye and dewormed. Bulls will be vaccinated for anaplasmosis upon request. If you will need additional or booster vaccinations for bulls wintered at 9 Peaks Ranch, we will vaccinate your bulls prior to delivery.

Inspection: The sale bulls may be viewed at any time at 9 Peaks Ranch. Videos of sale bulls will be available in late September at www.9peaksranch.com. Satisfaction is guaranteed on any sight-unseen purchases if you discuss your requirements with 9 Peaks Ranch.

Financing: Zero % Financing. Bulls left to winter at 9 Peaks Ranch can be financed with 50% due on sale day and 50% due upon delivery by April 1, 2025, with no interest charge.

ANGUSMEDIA™ EPDs contained in the hard copy of this sale book were current as of print date. Digital versions of this sale book can be viewed online at www.angus.org and will have EPDs updated every Friday with the exception of EPD references in footnotes and photos. Any PDF downloads from the website will contain EPDs current as of the date downloaded. References: American Angus Association®, AHIR®, AngusLink™, CAB®, Pathfinder®.

DRIVING DIRECTIONS: Please don't rely on your GPS navigator. It will take you down all kinds of inappropriate roads out here!

From Redmond/Bend/LaPine

From US-97 North of Lapine, turn east onto OR-31
Go 29.2 miles to Fort Rock Road, the Fort Rock/Christmas Valley turnoff, turn east.
Go about 6 miles to Fort Rock.
Continue east. At 6 miles east of Fort Rock, continue EAST at the sweeping turn onto Derrick Cave Road. Do NOT go South on the Christmas Valley Highway.
Go 2.2 miles and follow the pavement NORTH along Derrick Cave Road. There is a dirt track through the desert BLM land that appears to be a short cut. You will see a hay pivot and our hay barns about a mile straight ahead. It is a shortcut, if you're on horseback. Otherwise, it's faster to go around.
Go about a mile, and follow the pavement EAST on Derrick Cave Road.
Go another mile, and continue straight (east) under the power transmission lines, onto Morrison Lane. This is a good, two lane graded gravel road. (The paved road leads north to our Derrick ranch.)
Go one mile east on Morrison Lane, and then turn SOUTH on Oil Dri Road. (If you are ever turning south on pavement, you are not in the right place!)
Go one mile south on Oil Dri Road. Then turn WEST at the 9 Peaks Ranch sign.

From Lakeview/Highway 31

From Paisley, go 47 miles northwest on Highway 31 over Picture Rock Pass.
Turn north (right) onto Old Lake Road.
Go 4.4 miles on Old Lake Road and turn north (left) onto Oil Dri Road.
Go 13.8 miles north on Oil Dri Road, continue through THREE 90-degree turns (first W, go 1.5 miles; then N, go 1.5 mi; then W again).
Turn off on to Flat Iron Ranch is about 1.5 miles W of last 90-degree turn.
From Klamath Falls
Go north on Highway 97 45 miles to Silver Lake Road/Klamath Marsh.
Turn east (right) onto Silver Lake Road. The name changes to Bear Flat Road with no turn. Go 50 miles to Highway 31 in Silver Lake.
Turn east (right) on Highway 31 and go 11 miles to Old Lake Road.
Turn north (left) onto Old Lake Road and go 4.4 miles to Oil Dri Road. Turn north (left) on to Oil Dri road.
Go 13.8 miles north on Oil Dri Road, continue through THREE 90 degree turns (first W, then N, then W again).
Turnoff to Flat Iron Ranch is about 1.5 miles W of last 90-degree turn.

We bought this bull in December of 2021. The Sitz Logo daughters are known for female fertility, excellent udders, and cow productivity. We went looking for a Logo son and found this one. He had a very good temperament and good feet, along with excellent fleshing ability. He is a moderate birth weight and moderate mature size bull with outstanding growth. We lost Logo in 2023, but we will continue to use him by AI. His first daughters will calve in 2025, and we are looking forward to putting them into production.

Owned with Lucky 7 Angus. Confidence Plus 804 has proven himself one of the most useful herdsires that we have purchased, or even used by AI. He now has an extensive proof as an AI sire both in the US and Australia. He has been an excellent heifer bull, with typically small and vigorous calves. The calves grow well to weaning, and the sons usually comprise the high-gain sire group on feed test. The daughters have bred up well as yearlings, and earn themselves a place in the herd with excellent mothering ability, great fleshing ability, and a high rate of breedback. We have killed our own grass-fed progeny, and have seen outstanding marbling and yield grade on his calves. His own performance for feed efficiency, along with many progeny tested for feed efficiency, puts him at the top end of the breed. We continue to have lots of sons to sell, and sons of 804 daughters to sell, because the 804 cattle are very solid across the board and don't often fall out of the herd.

We tried Testament as a young bull and have been pleased with the calves. He's a low birth-weight, high calving-ease bull with very high fertility predictions, high marbling and excellent foot structure. Testament's dam, Tehama Mary Blackbird E789, is a full sister to Tahoe's dam. The Mary Blackbird cows have been long-lasting, productive cows in our herd as well as in the Tehama herd. Tehama Angus Ranch has their first Testament daughters in production, and they are reported as moderate, feminine, eye-catching females with beautiful udders.

Intuition is a young heifer bull that offers moderate mature size, good foot structure, and good marbling. He is well-balanced across the board, with a solid, problem-free EPD profile. He should sire cattle that are highly functional, profitable, and problem-free in the commercial cow-calf sector.

Owned with Bill Barbani. Blitzen is truly a "Power Bull," transmitting growth and muscle onto moderate-framed offspring. We have appreciated the structural soundness and foot quality of his calves. One of the best things about Blitzen is his Pathfinder dam, Entella B881. The Blitzen daughters are much like the B881 cow: good mamas and among the easiest fleshing females we have ever raised.

Owned with Bill Barbani. We bred our B881 cow to Resource in 2018 because semen from his full brother, Recharge, was unavailable. We got another "Power Bull" very much like Blitzen. The Lightnings have a little less birthweight than the Blitzens, with similar growth, muscle, foot structure, soundness and especially fleshing ability. We have daughters in production now from Lightning, and they are beautifully made, moderate framed and good-uddered females that make good mama cows.

Cool sold as a yearling in 2014 as one of the top \$Beef prospects that year. The bull turned out to be a breed leader for exceptional docility and fertility. Scrotal Circumference and Heifer Pregnancy EPDs are in the top 10%, and Docility EPD is in the top 1% of the breed with many sons and daughters reported. Cool is a moderate birth-weight bull with a very good Calving Ease Direct EPD. The bull has been used heavily for natural service, several years running, at Big Dry Angus in Montana. This cow herd runs outside on extensive rangeland. Cool daughters have qualified their sire for the Pathfinder award, as they raise good calves and breed back very well.

We selected Recap as a yearling bull out of the GDAR herd in Montana. Recap has always been an impressive-looking bull, with exceptional structure, great feet, and an agreeable temperament. Recap has been used naturally in both the spring and fall cow herds, and maintained his condition notably well. He also comes from a high producing cow family. There are daughters in production at GDAR this year, and we will calve some daughters in 2025. We are continuing to use Recap, as his sons and daughters gain attention for their performance, carcass traits, and good looks.

Owned with Bill Barbani, DVM. We went back to the semen tank and used Pardner because we wanted more daughters in production. Our fall Pardner daughters have been herd bull producers, especially the Entella B881 cow. Pardner's dam, Elite Blackbird 6382, was 17 years old when she raised her last calf. Pardner is a high calving-ease bull that will reduce frame size. Superior fleshing ability and the motivation to go out and graze are hallmarks of the Pardner daughters.

9 Peaks Pardner Z508

Stellar is a low birth-weight bull with excellent growth traits. He is a breed leader for foot structure EPDs. We are impressed with the udders and mothering ability of the Stellar daughters. Stellar is siring cattle with good fleshing ability and a milk EPD that will work for programs that need to keep milk production moderate. PAP is outstanding.

Sitz Stellar 726D

9A

We do not trim hooves on any cattle at 9 Peaks Ranch. Trimming feet before a bull sale can be a deceptive practice and is at best a short-term fix. We believe in showing our customers what the cattle really are, and letting our customers select their bulls with full information. We do cull bulls and heifers as they develop if we see a problem.

9Δ SPRING YEARLINGS

We have been measuring both height and weight of our mature cows for over 30 years. If you want to keep a lid on mature size in this era of higher growth genetics, use the MW and MH EPDs listed on all of the bulls. Breed average for MH is +0.3. Bulls below 0.0 will reduce mature frame in most herds.

9A

A larger cow will raise a bigger calf than a smaller cow, right? Not necessarily! Consider this data from North Dakota State University Dickinson Research Center: Cows were separated into three groups based on their mature weight: the light group 1,200 pounds or lighter, medium group 1,300 pounds, large group 1,500 pounds and heavier. On average, the small cows' calves weaned at 617 pounds, the medium at 589 pounds, and the large cows' calves weaned at 572 pounds. Not only that, but the difference in feed requirements for 50 cows, from the large group to the small group, is 23 tons! Do you want to buy extra winter hay (and have lower summer stocking rates) to raise lighter calves? If not, be sure to keep an eye on mature weight and height EPDs on the bulls you buy.

IN PARTNERSHIP WITH

DVAuction

Contact Holly Foster (530) 570-0757 or J.C. Niesen (530) 218-8523

Watch and bid online for FREE!

Go to www.dvauction.com to register... it's as easy as 1, 2, 3.

1. Complete and submit the form on "Create New DVAuction Account"
2. Apply for bidding by clicking "apply for bidding" in upper left of your screen, at least 24 HOURS PRIOR to the auction
3. Tune into the sale and make your purchases!

You will receive an e-mail message to activate your account. Once the account has been activated, be sure to log back in prior to the sale to confirm your profile has been set up correctly. For questions, contact Western Video Market at wvm@wvmcattle.com or DVAuction at support@dvauction.com. DVAuction Help Desk 402-316-5460.

EXPLANATION OF EPDs

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

GROWTH

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height EPD (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight EPD (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height EPD (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

Cow Energy Value (\$EN), expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

MANAGEMENT

Docility (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Claw Set EPD (Claw), is expressed in units of claw-set score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

Foot Angle EPD (Angle), is expressed in units of foot-angle score, with a lower EPD being more favorable indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

CARCASS

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd.

MaternalPlus®

9 Peaks Elite Blackbird 6382 - Pictured at 14 years of age. Blackbird 6382 produced herd sire 9 Peaks Pardner Z508 at age 6, and continued to raise 15 calves in her lifetime. She shows up in quite a lot of the pedigrees of the 9 Peaks bull offering, through Pardner, and through great grandsons 9 Peaks Blitzen E890 and 9 Peaks Lightning G846.

ANGUS
THE BUSINESS BREED

COMMITMENT.

Raising quality registered Angus cattle takes commitment. As your genetic supplier, we take that seriously.

That's why we participate in MaternalPlus®. Through MaternalPlus, we devote extra time to tracking maternal traits beyond those normally required, ultimately targeting greater performance and predictability.

The data we choose to gather through this inventory-based program today sets the stage for reproductive and lifetime productivity tools tomorrow — tools to pioneer new ways of selecting the most profitable animals.

Herd improvement starts with smart decisions. A commitment to the female starts with MaternalPlus.

Contact AGI at 816-383-5100 or agi@angus.org for more information.

ANGUS MEANS BUSINESS.

PATHFINDER® COWS

What Makes a Pathfinder Cow?

To qualify, a female must have produced a calf within the past 18 months and it must have been reported through AHIR®. The cow must also meet the following criteria:

- Produce her first calf by 2 years and 181 days of age.
- Calve her first calf within 30 days of the herd's average age for first calving.
Determined separately for each herd from all first calf heifers reported in the herd.
- Maintain a regular calving interval. The maximum calving interval is:

$$365 \text{ days} + \left[\frac{30 \text{ days}}{\text{Number of calving intervals}} \right]$$

- Her first three calves must post a minimum average progeny weaning weight ratio of 105. OR she must reach an average progeny weaning weight of 105, later in life.
- A minimum of five calves in single-sex contemporary group is required each year to calculate the average.
- Calves must be sired by a Registered Angus bull.

NOTE: Females must meet the requirements annually to be included in the list, but once designated a Pathfinder Cow, she is always a Pathfinder.

Any cow that has earned the designation of Pathfinder will be denoted by the # before her name, in her pedigree. You will find quite a few Pathfinder cows in pedigrees throughout this sale book.
